

This work package only deals with type 1 vehicle (for local suborbital flights).

Define applications, other than carrying passengers, that could be proposed, using a suborbital vehicle, by addressing one of the following topics:

- Study of the launch of small payloads,
- Definition of experiments which could benefit from longer very low g-level period during one single parabola, being inspired by applications performed on-board Airbus Zero G,
- Other possible applications.

General characteristics of reference vehicles:
