

You will address one of the following topics:

1. Once you have specified the target vehicle 1 – suborbital vehicle for high-speed long-range transportation or 2 – a vehicle servicing LEO destinations ) on which you will be working, you will propose the design of large windows optimised for that vehicle's mission,

Or

2. For type 2 vehicle, you will envisage an interior layout that is as modern as possible (going a step further than the Crew Dragon's layout), notably by including space for a separate toilet.

Your final file will at least contain:

- Logic used for functional analysis,
- Identified requirements and constraints,
- A pre-project type architecture of vehicle, with the design, geometric and mass characteristics able to cover elements coming from functional analysis.

General characteristics for the reference vehicles:
